Practice Day 1

Marks : 10

Make an authentication system by your own where
1. Add a bootstrap navbar where there will be Sign Up and Login for unauthenticated users and Profile and Logout for authenticated users
2. A user can create an account
3. Can login to his account and after login redirect the user to his/her profile and show message **"Logged In Successfully"**
4. Can logout and after logout showed the message in the home page **"Logged Out Successfully"**
5. An authenticated user can only change his password with and without previous password

NB: At first try it by yourself without using the module code
